TRANSZORB® Transient Voltage Supressors

Stand-off Voltage 5.0 to 110V
Peak Pulse Power 5000W

Case Style P600

Dimensions in inches and (millimeters)

Features

- Plastic package has Underwriters Laboratory Flammability Classification 94V-0
- Glass passivated junction
- 5000W peak pulse power capability with a 10/1000µs waveform, repetition rate (duty cycle): 0.05%
- Excellent clamping capability
- Low incremental surge resistance
- Very fast response time
- Devices with $V_{(BR)}$ > 10V I_D are typically less than 1.0µA
- Available in uni-directional polarity only

Mechanical Data

Case: Molded plastic body over glass passivated junction

Terminals: Solder plated axial leads, solderable per MIL-STD-750, Method 2026

High temperature soldering guaranteed:
265°C/10 seconds, 0.375" (9.5mm) lead length,
5lbs. (2.3 kg) tension

Polarity: The color band denotes the cathode, which is positive with respect to the anode under normal TVS operation

Mounting Position: Any

Weight: 0.07 oz., 2.1 g

Packaging codes/options:
1/750 ea. per Bulk Box
4/800 ea. per 13" Reel (52mm Tape)
23/300 ea. per Ammo Box (52mm Tape)

Maximum Ratings and Characteristics Ratings at 25°C unless otherwise noted.

Parameter	Symbol	Value	Unit
Peak pulse power dissipation with a 10/1000µs waveform(1)	P_{PPM}	Minimum 5000	W
Peak pulse current with a 10/1000µs waveform(1)	I_{PPM}	See next table	A
Steady state power dissipation at T_L = 75°C lead lengths 0.375" (9.5mm)(2)	$P_{M(AV)}$	8.0	W
Peak forward surge current, 8.3ms single half sine-wave(3)	I_{FSM}	600	A
Instantaneous forward voltage at 100A(3)	V_F	3.5	V
Operating junction and storage temperature range	T_J, T_{STG}	–55 to +175	°C

Notes:
(1) Non-repetitive current pulse, per Fig. 3 and derated above T_A = 25°C per Fig. 2.
(2) Mounted on copper pad area of 1.6 x 1.6" (40 x 40mm) per Fig. 5.
(3) Measured on 8.3ms single half sine-wave or equivalent square wave, duty cycle = 4 pulses per minute maximum

Electrical Characteristics T_A = 25°C unless otherwise noted

Notes: (1) $V_{(BR)}$ measured after I_T applied for 300µs I_T=square wave pulse or equivalent
(2) Surge current waveform per Fig. 3 and derate per Fig. 2
(3) All items and symbols are consistent with ANSI/IEEE C62.35

Application

The 5KP series of high power transient voltage suppressors were designed to be used on the output of switching power supplies. These devices may be used to replace crowbar circuits. Both the 5 and 10 percent voltage tolerances are referenced to the power supply output voltage level.

They are able to withstand high levels of peak current while allowing a circuit breaker to trip or a fuse blow before shorting. This will enable the user to reset the breaker or replace the fuse and continue operation. For this type operation, it is recommended that a sufficient mounting surface be used for dissipating the heat generated by the Transient Voltage Suppressor during the transient or over-voltage condition.

Transient Voltage Suppressors are Silicon PN Junction devices designed for absorption of high voltage transients associated with power disturbances, switching and induced lighting effects.
